

ENVIRONMENTALLY FRIENDLY & SUSTAINABLE PACKAGING

OUR VISION STATEMENT

We are committed to producing sustainable packaging that is clean, safe, and protects the environment and the communities in which we live.

SFI® CERTIFIED

**SUSTAINABLE
FORESTRY
INITIATIVE**

SFI-00134

PCG is SFI® certified. We use raw materials that are socially beneficial and environmentally appropriate.

FSC® CERTIFIED

The mark of responsible forestry

PCG is FSC® certified, which ensures our products are environmentally responsible and sourced from sustainable forestry.

OUR INITIATIVES

Solar Energy

In 2015, 19,020 solar panels were installed on 11 acres of property adjacent to the Super Plant. This is the largest privately owned Solar Farm in the state of New York producing 2 Megawatts of electricity.

Energy Efficient Lighting

The 522,000 square foot Super Plant was built with the concept that it had to be “Sustainable” and “Green”. In partnership with NYSERDA (The New York State Energy Research and Development Authority), approximately 1,000 energy efficient lights were installed throughout the facility reducing energy consumption. Continuing with our “Green” initiatives, in 2017 the factory will convert to LED lighting.

Waste Water Treatment

We utilize the latest technology in making starch, which allows us to recycle waste water during the manufacturing process.

Recycled Paper

100% of corrugated waste paper is recycled and baled. It is then converted into recycled liner board and medium.

Recycled Plastic

All forms of plastic products are baled and recycled.

Recycled Metal

The metal strapping from the raw materials get chipped and recycled.
